

SV Industrial Ventilators

A breath of fresh air and comfort year-round!

Every industrial building, large or small, needs to keep air circulating and keep temperatures to a comfortable level. Ampelair ventilators are an effective, inexpensive, reliable, maintenance free ventilation solution. Using only the power of the wind they extract stale air and allow fresh air to circulate within the building.

Suits new installations or replacement
Wind driven means no running costs
Reliable 15 year warranty
Aluminium construction

Fully enclosed Stainless Steel self-lubricating bearings.
Also available in powder coated colour finish.
Available models: SV450, SV600, SV900.

15 YEAR WARRANTY

makes light work!

Dimensions

VENTILATOR HEAD

VARIABLE PITCH BASE BASE

All models and bases

Aluminium	Throat	Width	Height	Width	Height
SV450	450mm	625mm	405mm	740x640mm	280mm
SV600	600mm	770mm	450mm	900mm	280mm
SV900	900mm	1100mm	930mm	1200mm	390mm

Bases

Ampelair ventilators models: SV450, SV600 and SV900 are supplied complete with a Variable Pitch.

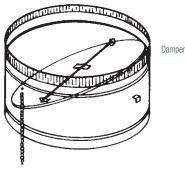

Dampers Available for 450mm, 600mm and 900mm throat diameter ventilators. Smaller sizes are not widely used but can be supplied against orders. Manually operated. Zincalume®

Capacity Table

Extraction volume expressed in cubic metres per second. 1 cubic metre = 1000 litres

Model SV Industrial Ventilators

The formula and capacity tables are useful guides in determining the model size and number of ventilators required. Building usage and other factors, finally determine the exact requirements for maximum efficiency and the comfort levels required. Ampelite can assist at design or specification stages in this regard.

Calculations

to decide size and number of Ventilators.

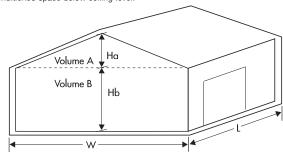

1. Determine the volume of the building

Volume of section A = 0.5 x L x W x Ha Volume of section $B = L \times W \times Hb$

Total building volume = volume of section A + volume of section B.

Note: For factories, the combined volume A + B should be used.

Where Volume B is air-conditioned, only Volume A is used to calculate the number of ventilators required. No air should be drawn from the airconditioned space below ceiling level.

2. Select the number of ventilators required

 $METRIC = V \times Ac/Hr$ EX/c x 3.6 Where:

V = Volume of building or roof space

Ac/Hr = Air changes per hour

EX/c = Exhaust capacity of ventilator

Building Type	Recommended Air Changes per Hour	
Warehouses	4 to 8	
Factories & Workshops	5 to 10	
Gyms, Tennis & Squash Courts	7 to 10	
Assembly Halls, Garages	10 to 15	
Toilets	12 to 15	
Laundries	20 to 40	
Stables, Piggeries & Poultry	20 to 50	
Bakeries, Boiler Houses	30 to 40
